25 / 100

DISCOVERY READINESS SCORE

Agent access (robots.txt)		10/10
Structured data (JSON-LD)		0/15
Product feeds (products.json, sitemap)		0/10
llms.txt		0/5

Readiness-only audit: discovery (public-surface) signals. The transaction layer (cart, checkout, live agents) was not tested.

EXECUTIVE SUMMARY

- All 13 agent user-agents are allowed by robots.txt.
- The /products.json catalog feed is disabled or inaccessible to agents.
- The sitemap is missing or unreadable, limiting product discovery.
- No llms.txt is published — an emerging convention that guides agents through the catalog.

HOW YOU COMPARE

Your discovery-readiness score of **25/100** — the public-surface signals every store exposes (robots, structured data, feeds, llms.txt) — places you in the **bottom 2%** of a cohort of 50 stores (median 85.5). 49 score higher.

Cohort: Top 50 Shopify-powered stores, June 2026. These are large, well-known stores, so a low rank here is a conservative read — the typical store scores lower. Discovery (public-surface) only; transaction-layer and dispute benchmarks are not cohort-derived.

CAN EACH AGENT BUY FROM YOU?

AGENT	DISCOVER	READ PRODUCT	REACH CART	REACH CHECKOUT	LIVE OUTCOME
ChatGPT (OpenAI) INFERRED	yes	—	—	—	not live-tested
Perplexity INFERRED	yes	—	—	—	not live-tested
Claude (Anthropic) INFERRED	yes	—	—	—	not live-tested
Google (Gemini/AI) INFERRED	yes	—	—	—	not live-tested
Amazon (Rufus) INFERRED	yes	—	—	—	not live-tested
Apple Intelligence INFERRED	yes	—	—	—	not live-tested
Meta AI INFERRED	yes	—	—	—	not live-tested
ByteDance (TikTok) INFERRED	yes	—	—	—	not live-tested

Rows tagged INFERRED were not live-tested (only ChatGPT, Perplexity and Claude are run as live purchases today). Their cart/checkout cells are inferred from robots access and the shared automated probe, not a per-agent purchase attempt. "Discover" = allowed by robots.txt; "Read product" = required structured-data fields present.

DISCOVERY LAYER

13/13 agent user-agents allowed by robots.txt.

FEED	STATUS	NOTES
products.json	fail	products.json returned 404
sitemap.xml	fail	sitemap.xml returned 404
llms.txt	fail	llms.txt returned 404

No product pages were sampled.

WHERE AGENTS DROP OFF

No agent drop-off signals detected across discovery, cart, or checkout.

FIX LIST

#	FIX (RANKED BY IMPACT ÷ EFFORT)	IMPACT	EFFORT
1	Re-enable the /products.json feed The simplest structured catalog surface agents can read.	3/5	1/5
2	Publish a product sitemap Without a sitemap, agents sample whatever navigation exposes — usually a fraction of the catalog.	4/5	2/5
3	Publish an llms.txt index Emerging convention; cheap to add and increasingly read by assistants.	2/5	1/5
4	Unblock the add-to-cart → checkout path The automated probe could not reach checkout; every agent purchase fails at this wall.	5/5	3/5

COPY-PASTE FIXES

llms.txt — a guided index for AI agents

Serve this at <https://wearlively.com/llms.txt>. Emerging convention; cheap to add and increasingly read by assistants.

METHODOLOGY & CAVEATS

- This is a **readiness-only** audit: it measures the public storefront (robots, feeds, structured data, checkout reachability). Order classification and dispute exposure require the merchant's order data and are not included here.
- Discovery checks read the **initial HTML response** and do not execute JavaScript. Structured data injected client-side will read as missing here — which is also how agents that don't run JS (most crawler-class agents) see the page.
- Per-agent reachability is inferred from robots access and one shared automated probe except for ChatGPT/Perplexity/Claude, which are run as live purchases. Inferred rows are labeled.
- Automated checks stop at the checkout information page; no purchase is ever completed and no payment fields are entered. CAPTCHA presence is recorded, never solved or bypassed.
